Common Infinite Algebra 1 Problems and Their Solutions

Below are some typical questions students encounter in Infinite Algebra 1, along with concise solutions. These examples illustrate the type of content you’ll find on Kuta Software.

Problem 1: Solve for x in 3x + 7 = 22

Solution: Subtract 7 from both sides: 3x = 15. Divide by 3: x = 5.

Problem 2: Solve the system of equations:

1. 2x + 3y = 12

2. 5x - y = 4

Solution: Use substitution or elimination. Multiplying the second equation by 3 gives 15x - 3y = 12. Adding to the first equation: 17x = 24 !’ x = 24/17 "H 1.41. Substitute back to find y "H 2.42.

Problem 3: Graph the inequality 2x - 5y "e 10

Solution: Convert to slope–intercept form: y "d (2x - 10)/5. Plot the boundary line y = (2x - 10)/5 and shade the region below the line.
